MACRO INTELLIGENCE BRIEFING

Combo F (Recovery) drives this week's outlook at week 11 of MEDIUM duration, powered by WTI crude collapsing to -14.58% YoY (1st percentile) as regional war disruptions compound deflationary pressures. This bullish 79% 6M hit rate signal outweighs bearish Combo E on horizon priority and signal strength despite extreme CAPE valuations at 42.7 (99th percentile).

Combo F Recovery remains ACTIVE since 2026-04-03, delivering 79% 6M bullish hit rate with +5.5% average returns as oil crash creates disinflationary tailwinds. Combo E Valuation Extreme holds CONFIRMED status with CAPE and NFCI legs active, posting 19% 12M bearish hit rate despite +10.9% average returns when successful. Combo B Capitulation sits on WATCH as CFTC positioning shows extreme net short at -503,509 contracts (1st percentile), creating potential sentiment reversal catalyst but lacking full activation criteria.

Three factors cement Recovery dominance: (1) WTI's 1st percentile collapse accelerates Fed dovish pivot in CUTTING_LATE regime, historically supporting 6M equity rallies during disinflationary episodes; (2) VXTS term structure inversion at 1.10 (44th percentile) signals structural volatility normalization despite elevated spot VIX at 19.4; (3) GLOBAL_EASY liquidity regime with NFCI at -0.506 (39th percentile) provides crucial backstop against valuation extreme headwinds in STEEPENING curve environment.

March 2020 presents the closest analog when WTI crashed -60% amid geopolitical tensions while CAPE exceeded 30x, delivering +13.1% 3M, +20.4% 6M, and +16.3% 12M SPX returns as Fed accommodation overwhelmed valuation concerns. June 2008 offers secondary comparison with oil volatility and curve steepening producing -8.7% 3M, -21.2% 6M, -37.0% 12M returns, but lacked current Fed easing posture. October 2002 provides tertiary reference with similar NFCI levels and recovery timing, generating +8.1% 3M, +14.2% 6M, +28.7% 12M performance.

System maintains TACTICAL EASY MONEY posture. Conditions for regime shift: (1) WTI recovery above -5% YoY for 3 consecutive weeks would cancel oil deflationary support; (2) NFCI rise above +0.50 for 2 weeks signals liquidity tightening; (3) VIX sustained break above 25 for 5 days indicates stress regime activation; (4) CAPE decline below 35x would reduce valuation extreme pressure.

LIVE VARIABLE DASHBOARD

#	Variable	Current	Tier	3yr Pctile	Signal	Combos
1	NFCI	-0.51	NORMAL	39%	DOWN	A,E
