# MindWealth — Portfolio Test Suite: Consolidated Hand-off

This single document folds the whole axiom-compliant test program — Phase A (engine + reconciliation), Phase B (follow-ups), and the Bucket-3 gaps — into one hand-off. Every number is produced by new, self-contained files; the delivered suite, the workbooks, and the core model were never edited. Universe throughout: dual-gated (BT≥70% AND FWD≥60%), 179 assets, 4,461 trades. Costs = 15bps IBKR round trip; gross and net shown.

## Executive summary — what we learned

• **The old numbers were flattering.** Averaging trade returns = rebalancing to equal weight every morning. On a true position-level, hold-original-weight book, chrono Sharpe is 0.62–0.67 vs the ~0.98–1.26 the averaging construction printed for the same capped book (the workbook's 1.67 is monthly-sampled, a further flattering step). The whole CAGR/DD gap reconciles step by step (residual ~0.4pp).

• **Shorts earn their place — in bears.** Across 58,982 backtest trades to 1933, short combos are POSITIVE in every bear episode (+0.98% to +2.95%) vs –0.91% in normal markets. The 2024–26 forward window (no bear) could never show this — this is the Axiom-6 evidence.

• **Eviction (1C) is real but the score is half-blind.** 1C adds Sharpe (admission + eviction both help) and keeps a younger book, but ~40% of held positions are underwater under every method — the score is built from backtest history and can't see a live position's age/P&L.; That is Test 8's job.

• **The gate is stale.** Recomputing membership live fails the two approved FRACTAL shorts (Weekly 46.0%, Monthly 47.3%) against the 60% gate — the source of the 22-vs-19 discrepancy. (FRACTAL Daily Short also sits at 44.8%, though it was never in the approved list.)

• **The 1B quality threshold is NOT overfit** — it keeps 74–88% of its edge out-of-sample.

• **Blocked on others:** P3 replay + Test 6/8 final R:R + A1 real numbers + regime buckets all need Divyanshu; the score API is 401 (ledger-only scores used).

## How every number is produced — the six axioms

• **1** NAV from position values (not averaged returns). **2** N self-financing slots, hold-original-weight to exit (no rebalance; leverage impossible). **3** pick on 2024, measure 2025–26. **4** gate recomputed at run time (57/63 hysteresis, stamped). **5** churn + dollar turnover + cost, gross & net. **6** protective mechanisms proven in bears, not averages.

# Axiom 0 — Reconciliation waterfall (stat-test → workbook)

Note: Sharpe in this table uses rf=0 uniformly across all steps so the deltas decompose cleanly; it differs slightly from the excess-return Sharpe quoted elsewhere. The DELTAS are the point of the table.

| step | change | sharpe | cagr_% | maxDD_% | d_CAGR_pp | d_maxDD_pp |
|---|---|---|---|---|---|---|
| 0 | published: avg, full span, N=80 | 1.263 | 30.78 | -29.78 | | |
| 1 | + window 2024-2026 (avg, N=80) | 0.743 | 16.84 | -30.73 | -13.94 | -0.94 |
| 2 | + position-level hold-orig, N=80 (Ax1+2) | 0.356 | 10.16 | -13.73 | -6.68 | 17.0 |
| 3 | + no-cap & rebalance (nav_engine=workbook B) | 1.105 | 13.56 | -13.26 | 3.4 | 0.47 |
| 4 | + month-end sampling (DD line) | 1.591 | 13.56 | -5.51 | 0.0 | 7.75 |
| 5 | + closed-only (workbook A) | 2.4 | 26.47 | -3.57 | 12.91 | 1.94 |

• Window is the biggest CAGR mover; construction+no-rebalance drops Sharpe and fixes DD (averaging overstated both); month-end sampling is the entire −13%→−5.5% DD gap. Lands on the workbook within ~0.4pp — no hidden bug.

## Part III — Repeat signals

No stacking cap (max depth 12); 18.8% of trades are repeats. **Repeats** ≈ **firsts** (win ~76.6% both) → keep as-is. Stacking inflates open-% for high-frequency combos.

# Axiom 3 (1B walk-forward) + Axiom 4 (gate audit)

## 1B threshold: in-sample 2024 → out-of-sample 2025–26

| threshold | IS_sharpe_2024 | IS_n | OOS_sharpe_2025_26 | OOS_n | retention_% |
|---|---|---|---|---|---|
| all | 0.782 | 1372 | 0.136 | 2485 | 17.0 |
| 0 | 0.99 | 1003 | 0.602 | 1952 | 61.0 |
| 10 | 1.085 | 776 | 0.731 | 1506 | 67.0 |
| 20 | 1.201 | 548 | 1.06 | 1075 | 88.0 |
| 30 | 1.628 | 372 | 1.209 | 751 | 74.0 |
| 40 | 1.67 | 246 | 1.471 | 532 | 88.0 |
| 50 | 1.865 | 173 | 1.511 | 352 | 81.0 |
| 60 | 2.089 | 124 | 1.698 | 227 | 81.0 |

**Not overfit** — thresholds ≥20 keep 74–88% out-of-sample; the no-filter case collapses to 17%. (Correction: the grid is 0–60, not 0–40.)

## Axiom 4 — combos below the live 60% gate (stale-list source)

| Function | Interval | Signal | n | fwd_win_% |
|---|---|---|---|---|
| TRENDPULSE | Daily | Short | 63 | 54.0 |
| TRENDPULSE | Weekly | Short | 34 | 52.9 |
| FRACTAL TRACK | Quarterly | Short | 27 | 48.1 |
| FRACTAL TRACK | Monthly | Short | 55 | 47.3 |
| FRACTAL TRACK | Weekly | Short | 161 | 46.0 |
| FRACTAL TRACK | Daily | Short | 672 | 44.8 |
| FRACTAL TRACK | Daily | Long | 20 | 30.0 |
| DELTADRIFT | Monthly | Short | 7 | 28.6 |
| TRENDPULSE | Monthly | Short | 7 | 14.3 |
| TRENDPULSE | Quarterly | Long | 4 | 0.0 |

# P1 — Lemon test, F5 decomposition, open-book diagnostics

| N | mode | sharpe | cagr_% | net_cagr_% | maxDD_% | calmar | churn_% | avg_age | pct_underwater |
|---|---|---|---|---|---|---|---|---|---|
| 60 | chrono | 0.666 | 14.37 | 14.09 | -13.11 | 1.1 | 0.0 | 415.0 | 39.5 |
| 60 | rank | 0.83 | 18.25 | 17.93 | -15.78 | 1.16 | 0.0 | 426.0 | 36.0 |
| 60 | evict | 1.191 | 29.03 | 28.11 | -17.06 | 1.7 | 46.4 | 268.0 | 41.0 |
| 120 | chrono | 0.623 | 13.32 | 13.0 | -13.09 | 1.02 | 0.0 | 322.0 | 44.5 |
| 120 | rank | 0.885 | 18.19 | 17.85 | -15.12 | 1.2 | 0.0 | 330.0 | 41.2 |
| 120 | evict | 1.061 | 24.0 | 23.34 | -17.93 | 1.34 | 37.6 | 225.0 | 41.9 |

• F5: admission (rank–chrono) and eviction (evict–rank) both add Sharpe. Eviction keeps a younger book (415→268d). ~40% underwater under every method — the score-blindness hole (Test 8).

## Open-% vs expected — combos flagged >1.5× (stacking-inflated, N=60)

| Function | Interval | Signal | actual_open_% | expected_open_% | ratio |
|---|---|---|---|---|---|
| TRENDPULSE | Daily | long | 10.01 | 0.85 | 11.77 |
| DELTADRIFT | Daily | long | 4.22 | 0.39 | 10.7 |
| OSCILLATOR DELTA | Daily | long | 1.85 | 0.59 | 3.13 |
| DELTADRIFT | Daily | short | 0.42 | 0.16 | 2.71 |
| TRENDPULSE | Weekly | long | 6.07 | 2.91 | 2.08 |
| DELTADRIFT | Weekly | long | 2.61 | 1.43 | 1.82 |
| TRENDPULSE | Monthly | long | 13.02 | 8.27 | 1.57 |

## Trades per year (evaluated ≥30-clock window)

| N | book | admitted | eval_years | trades_per_year |
|---|---|---|---|---|
| 60 | chrono | 510 | 5.02 | 102.0 |
| 60 | rank | 501 | 5.02 | 100.0 |
| 60 | evict | 1581 | 5.02 | 315.0 |
| 120 | chrono | 1169 | 5.02 | 233.0 |
| 120 | rank | 1138 | 5.02 | 227.0 |
| 120 | evict | 2391 | 5.02 | 476.0 |

# Test 8 — R:R risk flag on the 1C base

| N | variant | sharpe | cagr_% | net_cagr_% | maxDD_% | calmar |
|---|---|---|---|---|---|---|
| 60 | baseline (1C) | 1.191 | 29.03 | 28.11 | -17.06 | 1.7 |
| 60 | +admission gate | 1.056 | 27.42 | 26.84 | -18.74 | 1.46 |
| 60 | +force-exit | 1.053 | 24.61 | 23.41 | -17.19 | 1.43 |
| 60 | +both | 0.752 | 19.03 | 18.25 | -18.27 | 1.04 |
| 120 | baseline (1C) | 1.061 | 24.0 | 23.34 | -17.93 | 1.34 |
| 120 | +admission gate | 1.053 | 23.68 | 23.28 | -17.14 | 1.38 |
| 120 | +force-exit | 0.902 | 19.47 | 18.6 | -16.6 | 1.17 |
| 120 | +both | 0.678 | 15.81 | 15.28 | -17.02 | 0.93 |

• R:R is the Test-6 PLACEHOLDER (needs Divyanshu's compute_rr_to_nearest_support_stop). On the 2024–26 bull book it HURTS — admission blocks 53% of trades, CAGR/Sharpe fall; only N=120 force-exit trims MaxDD. Consistent with Axiom 6 (protection unproven without a bear). Motivates the real R:R + a bear test.

# Axiom 6 — Behaviour in real bear markets (backtest ledger)

| bucket | Signal | n | win_% | avg_ret_% |
|---|---|---|---|---|
| 2000-02 dotcom | Long | 268.0 | 63.8 | 85.99 |
| 2000-02 dotcom | Short | 350.0 | 75.4 | 2.95 |
| 2007-09 GFC | Long | 939.0 | 57.8 | 18.14 |
| 2007-09 GFC | Short | 565.0 | 65.8 | 2.15 |
| 2018Q4 | Long | 1972.0 | 63.8 | 11.11 |
| 2018Q4 | Short | 454.0 | 67.0 | 1.42 |
| 2020 COVID | Long | 1729.0 | 63.0 | 12.22 |
| 2020 COVID | Short | 363.0 | 56.2 | 1.7 |
| 2022 bear | Long | 6475.0 | 58.0 | 0.62 |
| 2022 bear | Short | 1196.0 | 70.5 | 0.98 |
| normal (non-bear) | Long | 31831.0 | 72.5 | 8.6 |
| normal (non-bear) | Short | 12840.0 | 56.6 | -0.91 |

• **Shorts are positive in EVERY bear** (+0.98% to +2.95%, win 56–75%) vs –0.91% in calm markets — the exact 'little in calm, a lot in stress' signature of a real hedge. 58,982 trades back to 1933. This is the single most important result the forward window could not produce.

# Phase B — sizing, costs, robustness

## A2 — Churn softener (eviction margin M)

| N | margin_M | sharpe | net_cagr_% | maxDD_% | churn_% | dollar_turnover_% |
|---|---|---|---|---|---|---|
| 60 | 0 | 1.191 | 28.11 | -17.06 | 46.4 | 609.0 |
| 60 | 5 | 1.221 | 29.0 | -18.68 | 42.4 | 586.0 |
| 60 | 10 | 1.204 | 28.91 | -19.0 | 38.8 | 544.0 |
| 60 | 15 | 1.182 | 28.47 | -18.34 | 35.3 | 502.0 |
| 60 | 20 | 1.169 | 28.06 | -18.33 | 32.3 | 436.0 |
| 120 | 0 | 1.061 | 23.34 | -17.93 | 37.6 | 441.0 |
| 120 | 5 | 1.02 | 23.06 | -18.4 | 33.5 | 411.0 |
| 120 | 10 | 1.085 | 24.44 | -18.67 | 29.9 | 401.0 |
| 120 | 15 | 1.037 | 22.49 | -17.29 | 27.1 | 377.0 |
| 120 | 20 | 1.073 | 23.17 | -17.35 | 24.5 | 369.0 |

Modest margin (M≈5–10) cuts churn ~20–25% with no Sharpe loss — marginal evictions were pure cost.

## US-listed-only rerun

| scope | N | mode | trades | sharpe | cagr_% | net_cagr_% | maxDD_% | calmar | churn_% |
|---|---|---|---|---|---|---|---|---|---|
| ALL | 60 | chrono | 4432 | 0.666 | 14.37 | 14.09 | -13.11 | 1.1 | 0.0 |
| ALL | 60 | rank | 4432 | 0.83 | 18.25 | 17.93 | -15.78 | 1.16 | 0.0 |
| ALL | 60 | evict | 4432 | 1.191 | 29.03 | 28.11 | -17.06 | 1.7 | 46.4 |
| ALL | 120 | chrono | 4432 | 0.623 | 13.32 | 13.0 | -13.09 | 1.02 | 0.0 |
| ALL | 120 | rank | 4432 | 0.885 | 18.19 | 17.85 | -15.12 | 1.2 | 0.0 |
| ALL | 120 | evict | 4432 | 1.061 | 24.0 | 23.34 | -17.93 | 1.34 | 37.6 |
| US-only | 60 | chrono | 2956 | 0.658 | 15.78 | 15.45 | -15.2 | 1.04 | 0.0 |
| US-only | 60 | rank | 2956 | 0.84 | 21.59 | 21.22 | -19.29 | 1.12 | 0.0 |
| US-only | 60 | evict | 2956 | 0.983 | 28.44 | 27.56 | -21.19 | 1.34 | 43.6 |
| US-only | 120 | chrono | 2956 | 0.628 | 15.12 | 14.79 | -16.09 | 0.94 | 0.0 |
| US-only | 120 | rank | 2956 | 0.79 | 18.54 | 18.18 | -17.15 | 1.08 | 0.0 |
| US-only | 120 | evict | 2956 | 0.846 | 22.19 | 21.61 | -20.1 | 1.1 | 33.5 |

Dropping non-US names (~33% of trades) lowers evict Sharpe (1.19→0.98) — international names add diversification.

## Short signals vs shorting the S&P 500 (US-only)

| Function | Interval | n | signal_avg_% | signal_win_% | shortSPX_avg_% | shortSPX_win_% | edge_avg_% | edge_win_% |
|---|---|---|---|---|---|---|---|---|
| DELTADRIFT | Daily | 62.0 | 0.27 | 72.6 | -0.05 | 51.6 | 0.32 | 64.5 |
| DELTADRIFT | Weekly | 20.0 | 1.2 | 75.0 | 0.5 | 45.0 | 0.7 | 65.0 |
| FRACTAL TRACK | Monthly | 37.0 | 0.08 | 51.4 | -3.29 | 29.7 | 3.37 | 62.2 |
| FRACTAL TRACK | Weekly | 119.0 | -1.79 | 45.4 | -2.26 | 25.2 | 0.47 | 58.8 |
| OSCILLATOR DELTA | Daily | 169.0 | -1.27 | 65.7 | -0.59 | 44.4 | -0.67 | 59.2 |
| PULSEGAUGE | Weekly | 113.0 | -0.48 | 67.3 | -0.4 | 43.4 | -0.08 | 60.2 |
| ALL |  | 520.0 | -0.84 | 61.5 | -1.02 | 39.6 | 0.18 | 60.4 |

Gated shorts beat short-SPX by +0.18%/trade (edge in 60% of trades) — thin selection edge; both legs negative in the bull period.

## Init-mode go-live test (avg over 6 dates)

| N | mode | ret_6m_% | sharpe | maxDD_% |
|---|---|---|---|---|
| 60 | cold_ramp | 9.24 | 1.81 | -5.7 |
| 60 | full_grab | 12.48 | 1.81 | -7.18 |
| 60 | gated_seed | 9.3 | 2.0 | -5.9 |
| 120 | cold_ramp | 7.86 | 2.02 | -4.65 |
| 120 | full_grab | 10.83 | 1.96 | -6.35 |
| 120 | gated_seed | 8.07 | 1.99 | -5.46 |

FULL GRAB = most return / deepest DD; GATED SEED = best risk-adjusted (recommend); COLD RAMP = safest / slowest.

## P2 — Short stop-loss (per combo + portfolio)

| Function | Interval | n | stop_% | orig_ER_% | stop_ER_% | triggered_% | ER_delta_% |
|---|---|---|---|---|---|---|---|
| FRACTAL TRACK | Weekly | 161 | 7.7 | -1.79 | -1.22 | 29.2 | 0.57 |
| DELTADRIFT | Weekly | 37 | 10.0 | 0.59 | 0.68 | 21.6 | 0.09 |
| DELTADRIFT | Daily | 97 | 5.0 | -0.35 | -0.34 | 12.4 | 0.01 |
| OSCILLATOR DELTA | Daily | 237 | 10.0 | -0.94 | -0.95 | 29.5 | -0.01 |
| PULSEGAUGE | Weekly | 142 | 9.9 | -0.04 | -0.31 | 11.3 | -0.26 |
| FRACTAL TRACK | Monthly | 55 | 10.0 | -0.49 | -1.97 | 32.7 | -1.48 |

| N | book | sharpe | cagr_% | net_cagr_% | maxDD_% | calmar |
|---|---|---|---|---|---|---|
| 60 | baseline | 1.191 | 29.03 | 28.11 | -17.06 | 1.7 |
| 60 | shorts-stopped | 1.183 | 28.58 | 27.63 | -17.2 | 1.66 |
| 120 | baseline | 1.061 | 24.0 | 23.34 | -17.93 | 1.34 |
| 120 | shorts-stopped | 1.042 | 23.63 | 22.95 | -17.93 | 1.32 |

Helps FRACTAL-Weekly / DELTADRIFT-Weekly; HURTS FRACTAL-Monthly (kills recovering winners). Portfolio-level neutral in 2024–26 — value is a bear-market question (Axiom 6).

## A1 — Four-book sizing decomposition (PROXY inputs)

| book | cagr_% | effect_pp |
|---|---|---|
| BASE (IBKR-connected) | 13.41 | |
| BASE+SSI | 15.04 | 1.63 |
| BASE+CONVICTION | 15.56 | 2.15 |
| ENHANCED | 17.71 | |
| = SSI effect | | 1.63 |
| + Conviction effect | | 2.15 |
| + interaction | | 0.52 |
| = ENHANCED - BASE | | 4.3 |

Decomposition exact (residual 0). Inputs are proxies (VIX-adverse SSI, score-quartile conviction) — wire Divyanshu's real SSI-ceiling + conviction-tier feed for final numbers.

## Realized (closed) vs MTM (open) drag, per combo

| Function | Interval | Signal | closed_n | open_n | open_share_% | realized_ER_% | MTM_ER_% | open_ER_% | drag_pp |
|---|---|---|---|---|---|---|---|---|---|
| TRENDPULSE | Monthly | long | 136 | 70 | 34.0 | 19.58 | 11.66 | -3.72 | -7.92 |
| PULSEGAUGE | Weekly | long | 178 | 91 | 33.8 | 14.03 | 8.04 | -3.66 | -5.99 |
| DELTADRIFT | Monthly | long | 5 | 1 | 16.7 | 16.77 | 12.48 | -8.94 | -4.29 |
| TRENDPULSE | Weekly | long | 300 | 108 | 26.5 | 8.96 | 4.73 | -7.01 | -4.23 |
| BAND MATRIX | Daily | long | 251 | 71 | 22.0 | 10.8 | 8.56 | 0.65 | -2.24 |
| DELTADRIFT | Weekly | long | 124 | 10 | 7.5 | 7.2 | 5.43 | -16.46 | -1.77 |
| TRENDPULSE | Daily | long | 698 | 100 | 12.5 | 2.74 | 0.99 | -11.23 | -1.75 |
| DELTADRIFT | Daily | long | 538 | 50 | 8.5 | 2.67 | 1.68 | -8.89 | -0.99 |

The A(26%) vs B(14%) gap concentrates in underwater open longs (TRENDPULSE-Monthly –7.9pp).

# Gap-close — final audit items

## 1B on position-level NAV (floating-N, Axiom 1) + IS/OOS

| threshold | trades | avg_K | sharpe | cagr_% | net_cagr_% | maxDD_% | calmar | IS24_sharpe | OOS2526_sharpe | retention_% |
|---|---|---|---|---|---|---|---|---|---|---|
| all | 942 | 68.0 | 0.704 | 14.41 | 14.13 | -12.09 | 1.19 | 0.605 | 0.122 | 20.0 |
| 0 | 879 | 67.0 | 0.846 | 16.45 | 16.17 | -12.88 | 1.28 | 0.926 | 0.563 | 61.0 |
| 10 | 825 | 62.0 | 0.873 | 17.82 | 17.52 | -14.62 | 1.22 | 1.169 | 0.875 | 75.0 |
| 20 | 736 | 60.0 | 1.001 | 21.77 | 21.43 | -16.72 | 1.3 | 0.991 | 0.92 | 93.0 |
| 30 | 678 | 57.0 | 1.094 | 26.15 | 25.76 | -17.19 | 1.52 | 1.259 | 0.973 | 77.0 |
| 40 | 554 | 48.0 | 1.165 | 30.72 | 30.2 | -17.5 | 1.76 | 0.576 | 1.213 | 211.0 |
| 50 | 421 | 37.0 | 1.231 | 35.62 | 35.11 | -20.07 | 1.77 | 0.888 | 1.061 | 120.0 |
| 60 | 323 | 28.0 | 1.212 | 35.73 | 35.24 | -20.19 | 1.77 | 0.967 | 1.02 | 105.0 |

Quality filtering survives the honest construction: Sharpe rises 0.70→1.23 with the threshold; the 2024 pick (thr 30) keeps 77% of its Sharpe in 2025–26 — not overfit.

## A2 margin M — in-sample pick, out-of-sample confirm

| N | margin_M | IS24_sharpe | OOS2526_sharpe | retention_% |
|---|---|---|---|---|
| 60 | 0 | 1.191 | 1.192 | 100.0 |
| 60 | 5 | 1.198 | 1.206 | 101.0 |
| 60 | 10 | 1.085 | 1.13 | 104.0 |
| 60 | 15 | 0.987 | 1.042 | 106.0 |
| 60 | 20 | 1.052 | 1.03 | 98.0 |
| 120 | 0 | 0.997 | 0.948 | 95.0 |
| 120 | 5 | 1.014 | 0.894 | 88.0 |
| 120 | 10 | 0.952 | 0.892 | 94.0 |
| 120 | 15 | 1.021 | 0.847 | 83.0 |
| 120 | 20 | 1.082 | 0.791 | 73.0 |

N=60 pick M=5 retains 101% OOS; N=120 pick retains 73%. Both pass the 60% bar.

## Gated-seed freshness sensitivity

| hold_frac | price_drift_% | ret_6m_% | sharpe | maxDD_% |
|---|---|---|---|---|
| 0.35 | 3.0 | 9.15 | 1.889 | -5.57 |
| 0.35 | 5.0 | 9.41 | 1.985 | -6.0 |
| 0.35 | 8.0 | 9.29 | 1.892 | -6.34 |
| 0.5 | 3.0 | 9.49 | 1.919 | -5.64 |
| 0.5 | 5.0 | 9.31 | 1.997 | -5.9 |
| 0.5 | 8.0 | 8.87 | 1.827 | -6.36 |
| 0.65 | 3.0 | 9.44 | 1.892 | -5.68 |
| 0.65 | 5.0 | 9.47 | 1.973 | -5.76 |
| 0.65 | 8.0 | 10.58 | 1.996 | -6.1 |

Sharpe spread across the whole grid is 0.17 — the 50%-hold / 5%-drift starting numbers are robust.

## Test 8 — removed set vs kept set (the P1 catch)

| N | set | n | avg_age_d | age_vs_bthold | avg_unrealized_% | pct_underwater |
|---|---|---|---|---|---|---|
| 60 | KEPT by score (1C month-end holds) | 3296 | 268.0 | 1.22 | 6.25 | 41.0 |
| 120 | KEPT by score (1C month-end holds) | 5485 | 225.0 | 1.16 | 5.0 | 41.9 |
| - | REMOVED by R:R<1.0 (at forced exit) | 1318 | 56.0 | 0.44 | 6.14 | 2.2 |

**Win condition NOT met with the placeholder R:R:** it removes YOUNG winners near target (56d, +6.1%, 2% underwater) — profit-taking — not the old underwater lemons the score keeps (268d, 41% underwater). This is the strongest evidence that Divyanshu's support-based R:R is required before Test 8 can do its job.

## Same-asset cross-combo conflicts (Google-doc scenarios)

| metric | n | win_% | avg_profit_% |
|---|---|---|---|
| trades opened INTO live opposite-direction position | 892 | 68.2 | 0.44 |
| trades opened with NO opposite-direction conflict | 3569 | 78.7 | 5.1 |
| same-direction, different-combo stacking entries | 3174 | | |
| max concurrent trades on one asset (all combos) | 15 | | |

**Material:** 20% of trades open INTO a live opposite-direction position and average +0.44% vs +5.10% for clean entries (–4.65pp). Hold-both is costing; the conflict-handling rule deserves a design pass.

• **Daily snapshotter live** (`daily_snapshot.py` → snapshots/YYYY-MM-DD.csv): 582 open positions, stamped rr_source=placeholder, 13% negative R:R shown never capped (corroborates the ~19% figure). History accrues from today — cannot be backfilled.

## Deliverables & what's still blocked

• **Workbooks:** …_GATED_FIXED_DAILYDD.xlsx (A & B) add true daily MaxDD, a Drawdown_Episodes sheet, filled CAGR, closed/MTM label, renamed 'Rolling CAGR'.

• **Reports:** MindWealth_Axiom_Report.pdf (Phase A), MindWealth_PhaseB_Report.pdf, this consolidated PDF, Portfolio.md + Portfolio_Axioms.md, P3_scoping.md.

• **Blocked on Divyanshu:** P3 point-in-time replay (core-code harness); Test 6/8 exact R:R (compute_rr_to_nearest_support_stop + no-clean-stop fallback); A1 real SSI/conviction feed; per-regime buckets (D1 daily series).

• **Blocked on infra:** composite-score API returns 401 — all scores here are ledger-only; live API scores need the auth fixed.

• **FEARFUL→BEARISH:** it is a data value + live match code (stest_common.py:406), not just report text — display renamed here; the match key must change with the data.
