

SSI Validation — Data Gap Report

Updated: 2026-06-07

Only variables with remaining data gaps are listed. Variables that are fully covered are omitted.

Section 1 — SSI Variables

Variables computed into the daily SSI score. Data lives in CSV caches under macro_intelligence/data/ssi/.

Data	Spec Requires	Have	Gap	Fixable?
CNN Fear & Greed	2011–2026 stock market index	2018-02-01 → 2026-06-06 · 3,052 rows (Alternative.me crypto F&G)	Wrong index. Cache is crypto sentiment, not CNN stock market F&G. Also missing 2011–2018.	Bloomberg CSV export only — no free source exists

Section 2 — Runic DB Variables

Variables stored in macro_intelligence/data/runic.db → daily_readings. Used in the Runic nightly briefing, regime classification, and combo logic.

Data	Spec Requires	Have	Gap	Fixable?
CFTC Fast Money (FM/RM)	2006–2026	2010-06-18 → 2026-07-03 · 840 rows	2006–2010 missing (~4 yr)	No — CFTC TFF format (FM/RM split) introduced Sep 2009; earlier data physically does not exist
HY Credit Spreads OAS	2006–2026 real OAS	2023–2026 real (163 rows) + 1997–2026 BAA10Y proxy · R ² =0.40	Proxy explains only 40% of OAS variance. Understates blow-outs in 2008/2020/2022. 3yr percentile skewed in stress regimes.	Paid data only — Bloomberg terminal or ICE Direct
CPI Surprise	Enough history for 3yr percentile	2024-01-12 → 2026-07-03 · 27 rows	Only 27 months — 3yr percentile unreliable until mid-2027	Partial — FRED CPI actuals back to 1947; consensus estimates (needed for "surprise") from Cleveland Fed (free)

Summary

Category	Total variables	No gap	Gap — fixable	Gap — paid data only	Gap — structural / impossible
SSI	6	5	0	1 (CNN F&G)	0
Runic DB	12	9	1 (CPI Surprise)	1 (HY OAS)	1 (CFTC pre-2010)
Total	18	14	1	2	1
