

CFTC Positioning Pattern Thresholds — Experiment Results for Sign-Off

Prepared for: Rohit Malhotra
Prepared by: Divyanshu (MindWealth SSI validation)
Report date: 2026-08-11
Experiment run: Tests 3-4 (cftc_grid_v2.py) — episode-collapsed distribution

1. Purpose

Grid-search results for **SQUEEZE** (FM low + RM high) and **LIQUIDITY EXIT** (RM low + FM high) before locking production Sentiment Layer 3 flags. **Display/alert only** — not SSI sizing gates (per 2 Aug email).

2. Data & methodology

Item	Value
CFTC Fast Money through	2026-08-04 (Tuesday position date)
CFTC Real Money through	2026-08-04
Percentile window	156 weeks (~3 years), rolling
Backtest start	2006-01-01
Episode collapse	Consecutive qualifying weeks → one episode (first fire date)
Forward returns	S&P 500 at 4w / 8w / 12w trading days
Benchmark	Mean SPX return across all weeks in sample per horizon
Excess	Per-episode SPX return minus benchmark; excess_hit = beat market
Ranking metric	Mean – median gap (tail marker), not Sharpe
Per-cell columns	n_wk, n_ep, mean, median, gap, hit %, best, worst, top dated instances
SQUEEZE JSON	03_squeeze_grid_v2_20260811.json
LIQUIDITY EXIT JSON	04_liquidity_exit_grid_v2_20260811.json

SQUEEZE: FM pctile < X AND RM pctile > Y (same week).

LIQUIDITY EXIT: RM pctile < X AND FM pctile > Y.

Worked examples — why mean–median gap, not Sharpe or hit rate alone

Example A (tail-driven squeeze is real): +22%, +18%, +14%, +3%, +2%, +1%, –1%, –2%, –4%

- mean **5.8889%**, median **2.0%**, gap **3.8889%**, hit **66.67%**, worst **-4.0%**

Example B (nothing there — market beta): +6%, +5%, +4%, +3%, +3%, +2%, +1%, −1%, −2%

- mean **2.3333%**, median **3.0%**, gap **-0.6667%**, hit **77.78%**, worst **-2.0%**

B has higher hit rate and better worst case. Only the gap and dated top instances reveal A's tail edge.

PAR (unconditional — every week in sample, no episode collapse)

Excess = SPX forward return minus mean SPX return across **all** weeks at that horizon.
excess_hit = share of observations that **beat the market** (excess > 0), not merely positive SPX.

- **4w** (bench 0.833464583312734%): n_wk=1033 | mean=0.8335% med=1.4661% | mean_excess=0.0% med_excess=0.6326% | hit=66.5% excess_hit=58.25%
- **8w** (bench 1.5670578026536852%): n_wk=1033 | mean=1.5671% med=2.2353% | mean_excess=0.0% med_excess=0.6682% | hit=68.98% excess_hit=55.71%
- **12w** (bench 2.3027025727526476%): n_wk=1033 | mean=2.3027% med=3.5011% | mean_excess=-0.0% med_excess=1.1984% | hit=71.6% excess_hit=59.55%

3. Executive summary

1. **SQUEEZE** top cell by 12w mean–median gap: FM_roll_pct<10 AND RM_roll_pct>55 (n_ep=21, n_wk=82, gap=0.4111%, mean=3.4364%, hit=80.0%, excess_hit=65.0%). Prior Sharpe-ranked FM<20/RM>45 shows **negative** gap — tracks market, not tail.
2. PDF default FM<30/RM>50: n_ep=43, gap=-0.5685%, mean=2.7585%, hit=74.42%.
3. **LIQUIDITY EXIT** RM<30/FM>60: n_ep=40, 4w gap=-0.673%, hit=32.5%, 12w mean=2.4849% — modest stress flag, not a strong short.
4. Patterns are **common** (~5–10 fires/year) — use as context flags only.

Recommended options

Pattern	Option A (tail gap)	Option B (PDF / more frequent)
SQUEEZE	see §4 top gap cells (e.g. FM_roll_pct<10 AND RM_roll_pct>55, gap 0.4111%)	FM < 30 , RM > 50 (gap -0.5685)
LIQUIDITY EXIT	RM < 25 , FM > 55 (see §5)	RM < 30 , FM > 60 (n_ep=40, 4w hit 32.5%)

4. SQUEEZE — full distribution per cell (12w, ranked by mean–median gap)

FM <	RM >	n_wk	n_ep	mean %	median %	gap %	hit %	mean_ex %	med_ex %	ex_hit %	best %	worst %	top instances (date ret)
10	55	82	21	3.4364	3.0253	0.4111	80.0	1.1337	0.7226	65.0	12.3439	-14.1928
